

English

Chinese

Suppose the opponent has high value on pens. For example, if the opponent values pens at 3 each, then getting 1 pen + sponge (if their sponge value is 1) is total of $3+1=4$. But if they get all pens ($3*3=9$) and give the assistant the H and sponge (but the assistant's H is worth 4, but opponent doesn't care), but wait. In the opponent's proposed scenario where opponent takes H and sponge, 助理 gets all pens.
